Financial highlights:

- Unaudited consolidated revenues increased by 15.8% YOY from EUR 4.530 million to EUR 5.245 million in 2017Q2, mainly due to higher revenues from electricity production and higher revenues from the O&M segment, as well as from the sale of technology. YTD, revenues increased 23.3% to EUR 8.031 million.
- Consolidated EBITDA increased to EUR 3.119 million (+11.9% YOY) in 2017Q2. YTD, EBITDA rose 20.5% to EUR 4.193 million.
- Consolidated EBIT increased to EUR 1.223 million (+26.6% YOY) in 2017Q2, YTD, EBIT grew by 71.8% to EUR 1.487 million.
- In 2017Q2 the Company recorded a profit before taxation of EUR 0.675 million, significantly higher than the EUR 0.199 million profit for the same period last year. YTD, the Company swung from a loss of 1.119 million in 2016H1 to a profit of EUR 0.456 million in 2017H1.
- ▶ The Company recorded a profit after taxation of EUR 0.394 million in 2017Q2, compared to EUR 0.347 million for the same period last year (+13.5% YOY) and posted YTD a EUR 0.082 million profit after taxation in 2017H1, compared to a loss of EUR 1.044 million in 2016H1.
- ▶ Total comprehensive income more than doubled to EUR 1.732 million in 2017Q2, compared to EUR 0.562 million one year ago. YTD, Total comprehensive income swung from a loss of 1.107 million in 2016H1 to a profit of EUR 1.601 million in 2017H1.
- Total equity increased to EUR 24.925 million at the end of 2017Q2 from EUR 24.180 million at year-end 2016 and from EUR 24.041 million at the end of 2017Q1.
- YOY the equity ratio increased from 31% at year-end 2016 to 37% 1.

Other highlights:

- In 2017Q2 the proprietary portfolio of PV plants generated approximately 10.2 GWh of electricity, which was 3.4% above the energy forecasts and up by 0.7% compared to 2016Q2 (up by 10.5% YOY YTD);
- Photon Energy announced a 1 GWp project development pipeline in Australia, including a 316 MWp project in Gunning, and a 155 MWp project in Gunnedah, both in New South Wales.
- Photon Energy entered the Hungarian PV market and as a first step acquired a ready-to-build 520 kW solar PV project.
- Photon Energy initiated the refinancing of its corporate EUR bond 2013/2018.

¹Equity ratio is defined as total equity divided by total capital, being the sum of interest-bearing debt capital and equity capital.

1.3. Standalone financial results for Photon Energy N.V., for the period of 1 April to 30 June 2017

Notes:

Exchange rates are provided by the European Central Bank.

All data quoted in this report refer to the current reporting period i.e. from 1 January until 30 June 2017, unless specified otherwise;

All references to growth rate percentages compare the results of the reporting period to those of the prior year comparable period;

Total Comprehensive Income (TCI) is the sum of the profit after taxes plus Other Comprehensive income (OCI). According to IAS 16, Other comprehensive income includes revaluation of PPE in a proprietary portfolio to their fair values, share on OCI of associates and joint ventures and foreign currency translation differences.

EPC stands for Engineering, Procurement and Construction and refers to services related to project design, engineering, procurement and construction of solar power plants.

 $Throughout \ this \ report \ Photon \ Energy \ Group \ is \ referred \ to \ as \ the \ "Group", \ the \ "Company", \ the \ "Issuer" \ and/or \ "Photon \ Energy".$

2. Management discussion and analysis

2.1. A note from the Management Board

Photon Energy has delivered an outstanding performance in 2017Q2, resulting in a 15.8% increase in revenues to EUR 5.245 million and in an increase in all indicators all the way down to the bottom line. The improvement in earnings experienced during the first quarter was therefore confirmed. This strong outcome was driven by a strong production and by a solid revenue increase in other revenue streams: Photon Energy's continued success is noticeably built on the first-class technology used in our projects, our core expertise in Operations & Maintenance services, and in technology trading. These strengths, along with the commercial efforts of our teams, mean that the business is in excellent shape to deliver long term sustainable growth. Business in Q3 has started well with key announcements made on project development in Australia as well as in Hungary. With this strong momentum, we remain confident of delivering strong results for the full year.

Strong electricity generation: Power plants produced 3.4% above predictions

Thanks to very favourable weather conditions in 2017Q2, generation results for our proprietary portfolio were well above energy audits. The accumulated average performance of the proprietary power plants connected and feeding electricity to the grid in 2017Q2 amounted to 10.2 GWh and was above the energy forecasts by an average of 3.4% (up by 10.5% YOY YTD).

Photon Energy announces a 1 GWp project development pipeline in Australia

Photon Energy's PV project pipeline is being developed in New South Wales and includes a 316 MWp solar project close to Gunning, a 155 MWp project at Gunnedah, on top of the previously announced projects in Leeton (22.6 MWp) and Environa (19MWp), for which the Network Technical Studies are progressing.

The PV project in Gunning would be the largest in New South Wales and one of the largest planned in Australia comparable in size to conventional utility scale power stations. The Solar Power Plant which would be constructed on 590 ha of land near Gunning is currently going through the Permitting and Grid Connection Process. Construction could start in early 2019. The Grid Connection Process is underway with Transgrid, the operator of the major high voltage transmission network in New South Wales and with the Australian Capital Territory, for the design of a substation for approximately 300 MW AC to be connected to Transgrid's 330 KV network.

The 155 MWp project in Gunnedah is being co-developed with a local joint venture partner and increases the volume of Photon Energy's location-specified projects to 512 MWp. Through its 51%-owned project company Photon Energy AUS SPV 7 Pty Ltd. the company has secured options on approximately 205 ha of land and is progressing with the New South Wales government State Significant Development process. Photon Energy has also signed a grid connection process agreement with Transgrid, the operator of the major high voltage transmission network in New South Wales and the Australian Capital Territory, for the design of a substation for approximately 150 MW AC to be connected to Transgrid's 330 KV network. Photon Energy expects to complete the project development process to the ready-to-build stage and to commence construction in 2018Q3.

The Company has mandated the financial and strategic advisory firm Pottinger Co Pty Limited to advise on a development capital raising expected to close in 2017Q4. Photon Energy trust Pottinger's track record in energy infrastructure financing to help the Company select the most suitable partners for this substantial pipeline. While it took a long time, it is obvious now that the strategic investment in Australia over the past six years is starting to bear fruits.

Given the attractive economics of PV power plants in Australia on the back of continuously falling investment costs, our Australian PV project pipeline is on track of becoming the most valuable asset in our Group.

Photon Energy acquires 520 kW solar PV project in Hungary

In Hungary, the efforts to build a PV project pipeline have begun to materialise. Photon Energy announced the acquisition of a project for a 520 KWp solar power plant in the North-West of Hungary. The project is ready-to-build and Photon Energy intends to start construction in 2017Q3 and connect the power plant before year-end.

Specifically, Photon Energy acquired 100% of the shares in Fertőd Napenergia-Termelő Kft., a Hungarian limited-liability company owning all licenses, rights and permits (including a valid construction permit) for the construction of a 520 KWp (DC) photovoltaic power plant (subject to a 499 KW AC grid connection). The project is located in the municipality of Fertőd, in the Győr-Moson-Sopron region of Hungary.

The PV plant is eligible for support under the KAT support system guaranteeing an off-take price of HUF 31,770 (EUR 103.34) per MWh of electricity supplied to the grid. During the 25-year support period the power plant is licensed to sell 14.3 GWh of renewable energy, generating revenues of at least EUR 1.478 million over the entire period.

The acquisition of the Fertőd project expands Photon Energy's project pipeline in Hungary to 12 projects with a planned installed capacity of 6.8 MWp. With this project Photon Energy is sending a clear signal to investors that the Company is committed to expanding its portfolio of power plants and with it significantly strengthen its long-term recurring revenue base.

Photon Energy initiates the refinancing of its corporate bond 2013/2018

In order to refinance the outstanding EUR bond due on 12 March 2018 and to raise capital for the construction of new PV power plants in Australia, Hungary and other potential markets, Photon Energy has mandated Munich-based Dero Bank AG to act as its advisor and lead manager for a planned EUR-denominated bond issue. Photon Energy intends to make a public exchange offer to the holders of its current bond and a public offer to new investors in 2017Q4. The terms of the new bond issue will be published at the time of the offering.

The current bond was issued by the Company as a 5-year corporate bond with an 8% annual coupon and quarterly payments in March 2013. With a denomination of EUR 1,000, it is traded in the Open Market of the Frankfurt Stock Exchange. The bond is also listed on the stock exchanges in Berlin, Hamburg, Hannover, Munich and Vienna.

Strong financial results

Consolidated revenues increased by 15.8% YOY to EUR 5.245 million, leading to an EBITDA improvement by 11.9% to EUR 3.119 million. Photon Energy recorded an outstanding EBIT, amounting to EUR 1.223 million, representing a 26.6% increase YoY. At the bottom line level, we are pleased to post a profit after taxation of EUR 0.394 million in 2017Q2 (+13.5% YOY) and a total comprehensive income of EUR 1.732 million, more than doubling YOY.

Turning to half-year results, Photon Energy achieved a EUR 0.082 million profit after taxation, representing a substantial swing from its EUR 1.044 million loss during the same period a year earlier. The company's 2017H1 revenues increased 23.3% to EUR 8.031 million, while EBITDA rose 20.5% to EUR 4.193 million and EBIT improved 71.8% to EUR 1.487 million. Photon Energy also managed to significantly improve its loss before taxation from EUR 1.119 million in 2016H1 to a profit of EUR 0.456 million in 2017H1.

2.2. Strategy and its execution

The objective of our strategy remains the generation of recurring revenue streams while maximizing customer value. Photon Energy's focus remains on:

- Production of electricity from the Group's portfolio of PV plants
- Customised Energy Solutions
- Decentralised Energy Production and Energy Storage Solutions
- Operations & Maintenance of PV plants and Energy Storage facilities
- PV technology trading

Our next steps are:

- The Photon Energy Operations team focuses on full O&M solutions in Central Europe and expands its Inverter Cardio services to additional inverter technologies covering the whole European market.
- Photon Energy's power plant control and monitoring solutions will be offered as a standalone product.
- The Australian market still remains our focus for the expansion of PV generation capacity. The Hungarian market promises to become a second pillar. Other potential markets in Central and South America, the Middle East and Africa remain under investigation.

In order to reduce the dependence on government subsidies in the future, the Group's strategy mainly focuses on the expansion to markets which have already reached Grid Parity, i.e. the cost of PV-generated electricity is competitive with grid-supplied electricity from traditional and other renewable energy sources.

2.3. Investment action plan and its implementation

The Company did not publish any investment action plan. As a result no plan was implemented.

2.4. Proprietary portfolio, generation results and O&M service

Proprietary portfolio

The table below presents the portfolio of power plants owned directly or indirectly by Photon Energy N.V. at the end of the reporting period i.e. as of 30 June 2017, consisting of 23 power plants in the Czech Republic, Slovakia, and Australia with a total installed capacity of 25.6 MWp. More information on the Group structure and the restructuring processes can be found in chapter 10. Group structure.

Notes

^{*} The FIT for the Czech Republic is an indicative figure only. As of 2016 Photon Energy switched to the "Green Bonus" system, under which energy from our power plants is sold under a different system, at a combined price slightly higher than the FIT.

^{**} Mostkovice SPV 1 & Břeclav rooftop power plants belong to the same legal entity.

^{***} Total result for Mostkovice SPV 3 and Mostkovice SPV 3R, as the same company "SPV3" owns both SPVs.

Chart 1.a Total production of the Czech portfolio

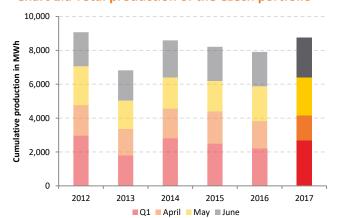

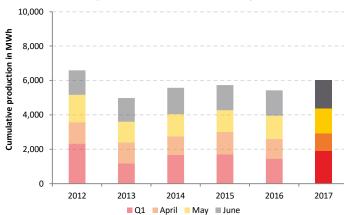

Chart 1.b Total production of the Slovak portfolio

O&M services

Photon Energy also remained focused on further expanding its Operations and Maintenance business in Europe. As of the end of 2017Q2, full O&M services contracts amounted to approximately 139 MWp, up by 46 MWp from the end of 2016Q2 (unchanged compared to 2017Q1), and can be broken down geographically into 111 MWp operated in the Czech Republic, 16 MWp in Slovakia, 11 MWp in Romania and 1 MWp in Australia. The O&M portfolio divides into 26 MWp of PV capacities from the proprietary portfolio and 113 MWp serviced for external clients.

As far as the "Inverter Cardio" services contracts are concerned, the Group is servicing 61 MWp of central inverters. In some countries like France or Germany the Group is holding a leading market position while in Belgium in particular, the Group is servicing all of the Satcon inverters ever installed. In detail, at the end of 2017Q2, the total cumulative capacity of central inverters can be divided regionally into France (21 MWp), Italy (15 MWp), Belgium (9 MWp), Czech Republic (8 MWp), Slovakia (5 MWp), Germany (2 MWp) and Bulgaria (1 MWp).

In July 2017, Photon Energy signed new contracts worth 3.6 MWp in the Czech Republic and now offers 204 MWp O&M services (full O&M services and "Inverter Cardio" services) across Europe and in Australia.

2.5. Reporting on Photon Energy's project pipeline

Photon Energy currently develops PV projects in Australia and Hungary and is evaluating further markets for opportunities.

Project development is a crucial activity in Photon Energy's business model of covering the entire value chain of PV power plants. The main objective of Photon Energy's project development activities is to expand its proprietary portfolio of PV power plants for long-term ownership, which provides recurring revenues and free cash flows to the Group. For financial or strategic reasons Photon Energy may decide to cooperate with third-party investors either on a joint-venture basis or with a view of exiting the projects to such investors entirely. Ownership of project rights provides Photon Energy with a high level of control and allows locking in EPC (one-off) and O&M (long-term) service revenues. Hence, project development is a key driver of Photon Energy's future growth. The Group's past experience in project development and financing in the Czech Republic, Slovakia, Germany and Italy is an important factor in selecting attractive markets and reducing the inherent risks related to project development.

Country	Location	MWp	Revenue Model	Land	Grid connection	Construction permit	Expected RTB
Australia	Leeton	22.6	Emarket + GC	Secured	Ongoing	Ongoing	2017Q4
Australia	Environa	19.0	Emarket + GC	Secured	Ongoing	Ongoing	2018Q1
Australia	Gunning	316.0	Emarket + GC or PPA	Secured	Ongoing	Ongoing	2019Q1
Australia	Gunnedah	155.0	Emarket + GC or PPA	Secured	Ongoing	Ongoing	2018Q3
Sub-total Australia		512.6					
Hungary	Pest region	6.3	Licensed PPA	Secured	Secured	Ongoing	2017Q4
Hungary	Fertöd	0.5	Licensed PPA	Secured	Secured	Secured	2017Q2
Sub-total Hungary		6.8					
Tota	ı	519.4					

Note: Emarket = Electricity market, GC = Green certificates, PPA = Power Purchase Agreement, RTB = Ready-to-build

PV projects have two definitions of capacity. The grid connection capacity is expressed as the maximum of kilowatts or megawatts which can be fed into the grid at any point in time. Electricity grids run on alternating current (AC). Solar modules produce direct current (DC), which is transformed into AC by inverters. Heat, cable lines, inverters and transformers lead to energy losses in the system between the solar modules and the grid connection point. Cumulatively system losses typically add up to 15-20%. Therefore, for a given grid connection capacity a larger module capacity (expressed as Watt peak – Wp) can be installed without exceeding the grid connection limit. In times of extremely high production inverters can reduce the volume of electricity so that the plant stays within the grid connection limits. Photon Energy will refer to the installed DC capacity of projects expressed in Megawatt peak (MWp) in its reporting.

Australia

On July 3, Photon Energy announced the development of a 316 MWp solar power plant in Australia. Located in Gunning, New South Wales, the PV project would be the biggest in New South Wales and one of the largest planned in Australia comparable in size to conventional utility scale power stations. The Solar Power Plant which would be constructed on 590 ha of land near Gunning is currently going through the Permitting and Grid Connection process. Construction could start in early 2019. The grid Connection Process is underway with Transgrid, the operator of the major high voltage transmission network in New South Wales and with the Australian Capital Territory, for the design of a substation for approximately 300 MW AC to be connected to Transgrid's 330 KV network.

On August 2, Photon Energy NV announced details on a 155 MWp project in Gunnedah, New South Wales. The project is being co-developed with a local joint venture partner. Through its 51%-owned project company Photon Energy AUS SPV 7 Pty Ltd. the company has secured options on approximately 205 ha of land and is progressing with the New South Wales government State Significant Development process. Photon Energy has also signed a grid connection process agreement with Transgrid, the operator of the major high voltage transmission network in New South Wales and the Australian Capital Territory, for the design of a substation for approximately 150 MW AC to be connected to Transgrid's 330 KV network. Photon Energy expects to complete the project development process to the ready-to-build stage and to commence construction in 2018Q3. Once connected, the Gunnedah project is estimated to produce 279 GWh of clean energy each year, contributing significantly to Australia's Renewable Energy Target. The Gunnedah project is being co-developed with a local joint venture partner owning the remaining 49% of the project company. The project is part of a previously announced 1 GWp project pipeline (which includes the Gunning project as well), for which Photon Energy has mandated advisory firm Pottinger to advise on the raising of development capital.

On the projects in Leeton (22.6 MWp) and in Environa (19 MWp), the Network Technical Study is progressing to finalise the Grid Connection.

Hungary

On 13 July 2017, Photon Energy announced the acquisition of a project for a 520 KWp solar power plant in the North-West of Hungary. The project is ready-to-build and Photon Energy intends to start construction in 2017Q3 and to connect the power plant before year-end. Specifically, Photon Energy acquired 100% of the shares in Fertőd Napenergia-Termelő Kft., a Hungarian limited-liability company owning all licenses, rights and permits (including a valid construction permit) for the construction of a 520 KWp (DC) photovoltaic power plant (subject to a 499 KW AC grid connection). The project is located in the municipality of Fertőd, in the Győr-Moson-Sopron region of Hungary. The PV plant is eligible for support under the KAT support system guaranteeing an off-take price of HUF 31,770 (EUR 103.34) per MWh of electricity supplied to the grid. During the 25-year support period the power plant is licensed to sell 14.3 GWh of renewable energy, generating revenues of at least EUR 1.478 million over the entire period. The acquisition of the Fertőd project expands Photon Energy's project pipeline in Hungary to 12 projects with a planned installed capacity of 6.8 MWp.

2.6. Enterprise Value & Share Price performance

2.6.1. NewConnect (Warsaw Stock Exchange)

On 4 June 2013 Photon Energy N.V. shares commenced trading on the NewConnect market at a price of PLN 2.00, after a share swap for the minority investors in the Czech predecessor company, originally listed on New Connect in 2008.

The quarter closed at a price of PLN 1.10 on 30 June 2017 (+1% YTD, +77% vs. 30 June 2016), corresponding to a price to book ratio of 0.55x. The Company also reports average monthly trading volume of 114,813 shares in 2017Q2, compared to an average monthly traded volume of 155,669 shares YTD and of 255,647 shares in 2016.

Chart 3. Enterprise value vs. trailing 12 months (TTM) EBITDA

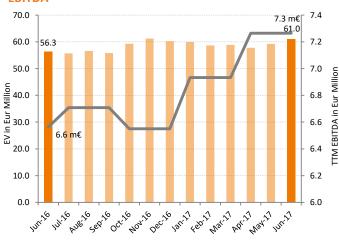

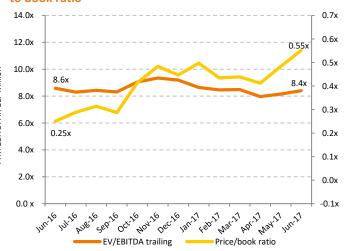

Chart 4. Enterprise value / trailing 12 months EBITDA & price to book ratio

Notes:

EV – Enterprise value is calculated as the market capitalisation as of the end of the reporting month, plus debt, plus minority interest, minus cash. All the balance sheet data are taken from the last quarterly report.

Trailing 12 months $\it EBITDA-defined$ as the sum of $\it EBITDA$ reported in the last four quarterly reports.

Price/book ratio – is calculated by dividing the closing price of the stock as of the end of the reporting period by the book value per share reported in the latest quarterly report.

2.6.2. Free Market (Prague Stock Exchange)

Since 17 October 2016, in addition to the listing on the NewConnect segment of the Warsaw Stock Exchange, the Company's shares have also been traded on the PSE Free Market. No additional shares have been issued, nor capital raised through this listing.

On 30 June 2017, the share price (ISIN NL0010391108) closed at a price of CZK 6.00 (-14% vs 31 December 2016, +22% vs CZK 4.90, the reference price on the first trading day on 17 October 2016), corresponding to a price to book ratio of 0.47x. The Company reports a quarterly trading volume of 66,934 shares, compared to 225,001 shares in 2017Q1.

2.7. Bond trading performance

In March 2013 Photon Energy N.V., at that time through its fully-owned subsidiary Photon Energy Investments N.V., placed a 5-year corporate bond with an 8% annual coupon and quarterly coupon payments in Germany, Austria, the Czech Republic, Slovakia and Poland. The bond is listed on the stock exchanges in Frankfurt, Berlin, Hamburg, Hannover, Munich and Vienna. Since listing the bond has been trading between 93.00% and 102.50%.

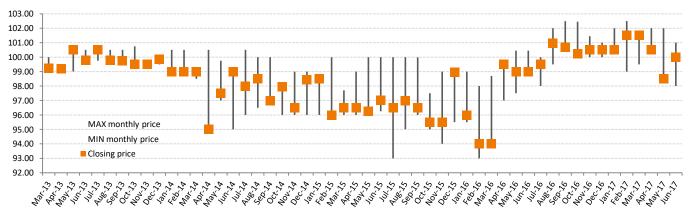

In December 2016, the Company issued a 7-year corporate bond with a 6% annual coupon and monthly coupon payments in the Czech Republic. The corporate bond, with a nominal value of CZK 30,000 (ISIN CZ0000000815), has been traded on the Free Market of the Prague Stock Exchange since 12 December 2016.

2.7.1. EUR Bond trading performance in Frankfurt

Chart 5. The Company's bond trading on the Frankfurt Stock Exchange in Germany between 1 July 2016 and 30 June 2017

Chart 6. MIN, MAX and closing monthly prices

In the trading period from 12 March 2013 until 30 June 2017 the trading volume amounted to EUR 8.704 million (nominal value) with an opening price of 100.00 and a closing price of 100.00. During this period the average daily turnover amounted to EUR 8,015.

EUR Bond trading performance in 2017Q2

In 2017Q2 the trading volume amounted to EUR 434,000 (384,000 in 2017Q1) with an opening price of 100.00 and a closing price of 100.00. The average daily turnover amounted to EUR 7,115 in the reporting period compared to EUR 5,908 in 2017Q1 and 5,693 for the full-year 2016. Since the beginning of the year, the Company issued an additional 248 bonds (of which 114 in 2017Q2) with a corresponding nominal value of EUR 0.248 million, bringing the total amount of subscribed bonds to EUR 10.368 million as of 30 June 2017.

2.7.2. CZK Bond trading performance in Prague

In the trading period from 12 December until 30 June 2017 the trading volume amounted to CZK 5,490,000 (nominal value) with a closing price of 100.00. In 2017Q2 the trading volume amounted to CZK 90,000.

2.8. Financial statement analysis

Profit and Loss statement

Unaudited consolidated revenues increased by 15.8% YOY from EUR 4.530 million to EUR 5.245 million in 2017Q2, mainly due to higher revenues from electricity production and higher revenues from the O&M segment, as well as higher revenues from trading of technology.

Consolidated EBITDA increased to EUR 3.119 million (+11.9% YOY) in 2017Q2. Consolidated EBIT increased to EUR 1.223 million (+26.6% YOY) in 2017Q2. In 2017Q2 the Company recorded a profit before taxation of EUR 0.675 million, significantly higher than the EUR 0.199 million profit for the same period last year.

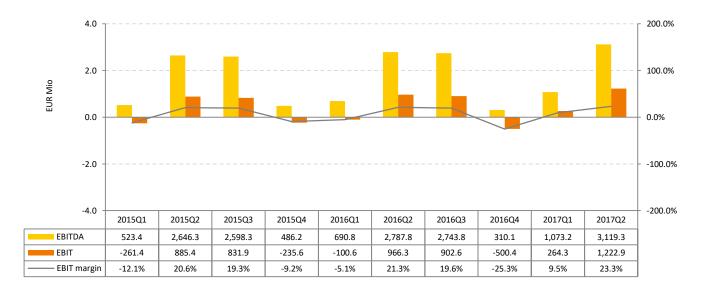

The Company recorded a profit after taxation of EUR 0.394 million in 2017Q2, compared to EUR 0.347 million for the same period last year (+13.5% YOY). Total comprehensive income more than doubled to EUR 1.732 million in 2017Q2, compared to EUR 0.562 million one year ago. Other comprehensive income was mainly influenced by changes of the exchange rate CZK vs EUR.

Chart 7. Revenues, gross profit and gross margin

The numbers presented above are based on quarterly published figures.

Chart 8. EBITDA, EBIT and EBIT margin development

The numbers presented above are based on quarterly published figures.

Balance Sheet

Total fixed assets amounted to EUR 72,240 million at the end of 2017Q2, a decrease by EUR 4.367 million compared to 2016Q2. The main reason for the decrease in assets is the annual depreciation.

Current assets increased from EUR 12.096 million as of 30 June 2016 to EUR 12.418 million as of 30 June 2017 mainly due to higher other receivables.

Total liabilities amounted to EUR 61.734 million as of the end of the reporting period compared to EUR 62.752 million as of the end of 2016Q2. Current liabilities increased by EUR 10.484 million (up from EUR 7.563 million in 2016Q2 to EUR 18.047 million in 2017Q2) mainly due to the reclassification of the EUR bond from long-term liabilities to short-term liabilities (due date 12 March 2018) compensated by lower trade payables and short-term loans.

Long term liabilities decreased by EUR 11.503 million from EUR 55.159 million in 2016Q2 to EUR 43.686 million in 2017Q2. The main drivers of the change in long term liabilities were the reclassification of the EUR bond to the short-term liabilities, the decrease in the outstanding balance of bank loans and other loans as well as slightly higher deferred tax liabilities.

Chart 9. Net current assets

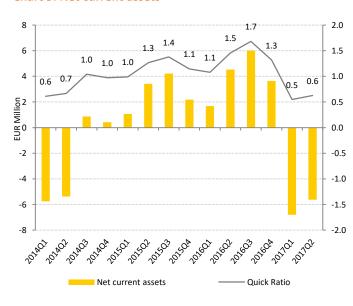

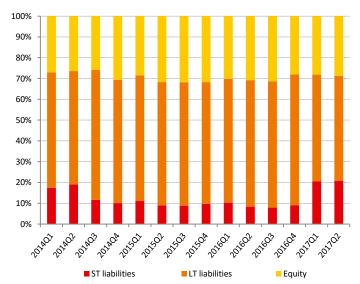

Chart 10. Break down of liabilities and equity

Changes in equity

Equity decreased to EUR 24.925 million in 2017Q2 compared to EUR 27.951 million in 2016Q2. This is mainly due to the results of the previous quarters. Total equity increased to EUR 24.925 million at the end of 2017Q2 from EUR 24.180 million at year-end 2016 and from EUR 24.041 million at the end of 2017Q1.

Cash Flow

The Group posted a positive operating cash flow for the second quarter of 2017, which amounted to EUR 0.731 million. Financial cash flow was negative and amounted to EUR 1.689 million driven primarily by the repayment of borrowings and interest expenses. Investment cashflow equalled to zero. All these movements were compensated by the effect of the change in exchange rates (a positive impact of EUR 1.323 million). Overall, the cash position decreased by EUR 0.957 million in total and amounted at EUR 4.716 million at the end of the reporting period (EUR 4.643 million one year ago).

2.9. Financial forecasts

The Company does not publish financial forecasts.

3. General information about the Issuer

The table below presents general information about Photon Energy N.V., hereinafter referred to as the "PENV", "Issuer", "the Group" and/or the "Company".

Company name: Photon Energy N.V.

Registered office: Barbara Strozzilaan 201, 1083 HN, Amsterdam, the Netherlands

Registration: Dutch Chamber of Commerce (Kamer van Koophandel)

Company number: 51447126

Tax-ID: NL850020827B01

Ticker: PEN

Web: www.photonenergy.com

4. Share capital of the Issuer

The Company's share capital is EUR 600,000 divided into 60,000,000 shares with a nominal value of EUR 0.01 each. The share capital is fully paid-up.

Share capital as of 30 June 2017

Series/ issue	Type of shares	Type of preference	Limitation of right to shares	Number of shares	Nominal value of series/issue (EUR)	Capital covered with
A	bearer	-	-	60,000,000	600,000	cash
Total number of shares				60,000,000		
Total share capital					600,000	
Nominal value per share = EUR 0.01						

In the reporting period there were no changes to the share capital. $\label{eq:capital} % \begin{center} \begi$

5. Shareholder structure

As of 30 June 2017, to the knowledge of the Board of Directors of Photon Energy N.V., the shareholder structure is as follows:

Shareholdership as of 30.06.2017	No. of shares	% of capital	No. of votes at the Shareholders Meeting	% of votes at the Shareholders Meeting
Solar Age Investments B.V.	26,467,000	44.11%	26,467,000	51.94%
Solar Future Cooperatief U.A.	8,590,683	14.32%	8,590,683	16.86%
Solar Power to the People Cooperatief U.A.	8,051,874	13.42%	8,051,874	15.80%
Photon Energy N.V.	9,043,068	15.07%	0	0.00%
Free float	7,847,375	13.08%	7,847,375	15.40%
Total	60,000,000	100.00%	50,956,932	100.00%

The free float includes shares allocated to the Employee incentive programme. The disposition rights to these shares are limited and employees can dispose of these shares only under specific conditions.

6. Statutory bodies of the Issuer

Board of Directors as of 30 June 2017

The Board of Directors is responsible for the day-to-day operations of the Company. The Issuer's Board of Directors has the following members:

Name	Position	Date of birth	Term of office expiry date	
Georg Hotar	Director (Bestuurder)	21.04.1975	No term of expiry	
Michael Gartner	Director (Bestuurder)	29.06.1968	No term of expiry	

Supervisory Board

Under Dutch law, a public company is required to establish a supervisory board if:

- ▶ The issued share capital of the company together with the reserves pursuant to the balance of sheet amounts to at least EUR 16 million,
- ▶ The company or a dependent company established a work council pursuant to a statutory obligation and,
- The company together with its dependent companies employs at least one hundred employees in the Netherlands.

The company will only be under the obligation to establish a supervisory board if it meets such criteria on the balance sheet dates in three subsequent financial years. The Issuer does not meet the above described criteria and therefore is not required to create a supervisory board.

No Supervisory Board was established, however, the Issuer has the intention to appoint an independent Supervisory Board in the future.

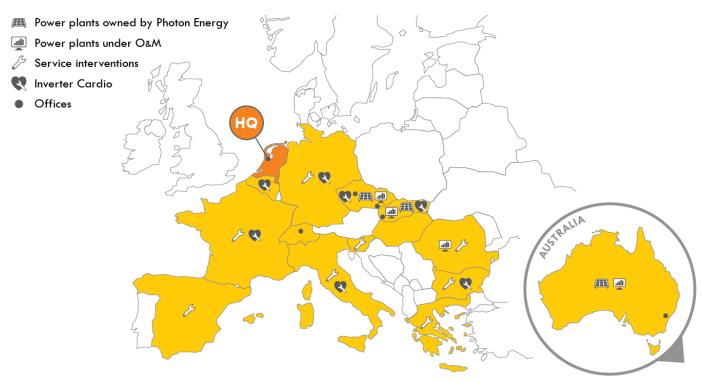

7. Description of the Issuer's business

Photon Energy N.V. ("Photon Energy", "PENV", "Issuer" or "Company") is the holding company of the Photon Energy Group and was incorporated under the laws of the Netherlands on 9 December 2010. The Photon Energy Group ("Group" or "PE Group") offers comprehensive solutions and maintenance services for photovoltaic systems that cover their entire lifecycle globally.

The Group is vertically integrated in the downstream segment of the photovoltaic industry. The company focuses on life-cycle services and delivers:

- Projects: Project development for rooftop and green-field installations from 300 kW to 300 MW.
- Solutions: Design and construction of on-grid and off-grid installations, including battery storage solutions.
- Technology: Trading of PV-components (modules and inverters).
- Investments: Investments in PV power plants and sustainable production and sale of electricity.
- Operations: Operations and maintenance of PV power plants, including own control room and monitoring platform.

Country-specific references

Currently the Photon Energy Group is active with 72 professionals in 5 countries across 2 continents (headquartered in Amsterdam). With a track record of 50 MWp of grid-connected PV plants across 5 countries and more than 200 MWp of PV power plants under O&M management across two continents.

8. Implementation of innovative activities in the Company

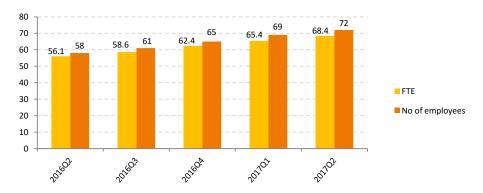

None during the reporting period.

9. Employees

As of the end of 2017Q2 the Photon Energy Group had 72 employees (compared to 58 employees in 2016Q2) which translates into 68.4 FTE¹ (compared to 56.1 FTE in 2016Q2).

Chart 11. Total number of employees and full time equivalent employees per quarter

¹ Full-time equivalent (FTE) is a unit that indicates the workload of an person in a way that makes workloads comparable across various contexts. An FTE of 1.0 means that the person is equivalent to a full-time worker, while an FTE of 0.5 signals that the worker is only half-time.

Employee Share Purchase Programme

The management of the Company recognises the significant contribution of the team members to the future development of the Group. Therefore, it operates an Employee Share Purchase Programme as a part of its motivation system. Under the terms of the programme, the Group periodically purchases shares for employees equal to 10% of their gross compensation. The disposition rights to these shares are limited and employees can dispose of these shares only under specific conditions.

10. Group structure

The following table presents the Group's structure (subsidiaries and joint-ventures) and the holding company's stake in the entities comprising the Group as of the reporting date.

	Name	% of share capital held by the holding company	Country of registration	Consolid. method	Legal Owner

Notes:

RL - Raiffeisen - Leasing, s.r.o.

In the reporting period, there were the following changes to the Group structure:

- On 22 May 2017, Photon Energy AUS SPV 5 Pty. Ltd. was incorporated as a Joint-venture held 51% by Photon Energy NV and 49% by Polpo Investments.
- On 23 May 2017, Photon Energy AUS SPV 6 Pty. Ltd. was incorporated as a Joint-venture held 51% by Photon Energy NV and 49% by Polpo Investments.
- On 30 June 2017, Photon Energy AUS SPV 7 Pty. Ltd. ,Photon Energy AUS SPV 8 Pty. Ltd., Photon Energy AUS SPV 9 Pty. Ltd. and Photon Energy AUS SPV 10 Pty. Ltd. were incorporated as Joint-ventures held 51% by Photon Energy NV and 49% by Polpo Investments each.

After the reporting period the following events occurred:

On 13 July 2017, Photon Energy Projects s.r.o. acquired Fertőd Napenergia-Termelő Kft.

11. Report on the key events material for the Group's operations

11.1. Summary of the key events from 1 April until 30 June 2017

Below is a summary of the key events which were important for the Issuer's business from 1 January until 31 March 2017 and which were reported in the EBI system:

- **EBI 8/2017** published on 11 April 2017: Photon Energy enters Hungarian market.
- **EBI 9/2017** published on 11 April 2017: Monthly report for March 2017.
- EBI 10/2017 published on 14 April 2017: Convocation of the Annual General Meeting of Shareholders on 29 May 2017.
- EBI 11/2017 published on 14 April 2017: The draft of resolutions of the AGM on 29 May 2017.
- **EBI 12/2017** published on 3 May 2017: Q & A Chat to be held in collaboration with Polish retail investors association SII on Wednesday, the 10th of May 2017 at 11:00am
- **EBI 13/2017** published on 9 May 2017: Quarterly report for 2017Q1.
- **EBI 14/2017** published on 11 May 2017: Monthly report for April 2017.
- **EBI 15/2017** published on 29 May 2017: The Minutes of the AGM of shareholders held on 29 May 2017.
- **EBI 16/2017** published on 12 June 2017: Monthly report for May 2017.
- **EBI 17/2017** published on 27 June 2017: Photon Energy arranges the refinancing of the corporate bond 2013/2018.

11.2. Summary of the key events after 30 June 2017

Below is a summary of the key events which were important for the Issuer's business after 30 June 2017 until the date of this report:

- EBI 18/2017 published on 3 July 2017: Photon Energy is developing a 316 MWp solar power plant in Australia.
- **EBI 19/2017** published on 12 July 2017: Monthly report for June 2017.
- **EBI 20/2017** published on 13 July 2017: Photon Energy acquires 520 kW solar PV project in Hungary.
- **EBI 21/2017** published on 19 July 2017: Photon Energy mandates Pottinger as financial advisors for Australian project pipeline.
- EBI 22/2017 published on 2 August 2017: Photon Energy announces the development of a 155 MWp solar plant in Australia.

12. Detailed consolidated financial results for 2017Q2

The tables below present the **consolidated** and **un-audited** financial statements of Photon Energy N.V. for the period starting on 1 April 2017 and ending on 30 June 2017 and the corresponding period of the previous year. The reported data is presented in accordance with **International Financial and Reporting Standards** (IFRS).

17. Summary of significant accounting policies

Basis of preparation

Our accounting policies are based on International Financial Reporting Standards (IFRS) as adopted by EU and were authorised for publication by the Board of Directors.

The following main standards are applied by Group:

- IAS 1 Presentation of financial information
- IAS 2 Inventories
- IAS 12 Income Taxes
- IAS 16 Property, plant and equipment
- IAS 18 Revenues
- IAS 21 The effects of changes in foreign exchange rates
- ▶ IAS 24 Related transactions presentation
- IAS 27 Consolidated and separate financial information
- IAS 28 Investments in Associates
- IAS 33 Earnings per Share
- IAS 36 Impairment
- IAS 37 Provisions
- IAS 38 Intangible Assets
- IFRS 3 Business combinations
- ▶ IFRS 5 Non-current assets held-for-sale and discontinued operations
- IFRS 8 Operating segments

Use of estimates and judgments

In preparing the financial information, the Company's management uses estimates and makes assumptions that affect the application of accounting policies and the amounts of assets, liabilities, income and expenses recognised in the financial information. These estimates and assumptions are based on past experience and various other factors deemed appropriate as at the date of preparation of the financial information and are used where the carrying amounts of assets and liabilities are not readily available from other sources or where uncertainty exists in applying the individual accounting policies. Actual results may differ from the estimates.

Estimates and assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised either in the period in which the estimate is revised, providing that the revision relates only to the current accounting period, or in the revision period and future periods, providing the revision affects both the current and future periods.

Provisions

A provision is recognised if, as a result of a past event, the Group has a present legal or constructive obligation that can be estimated reliably, and it is probable that an outflow of economic benefits will be required to settle the obligation. Provision are determined by discounting the expected future cash flows at a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the liability.

Presentation of Financial information

Financial information is presented based on historical costs with exemptions when IFRS requires different evaluation methods as described below in accounting policies. The statement of comprehensive income is presented with revenues and expenses classified by purpose (function). The cash flow statement is prepared using an indirect method.

Functional currency is the EURO (EUR) and for the purpose of the reporting, as required by the regulations of the Alternative System of Trading organised by the Warsaw Stock Exchange - NewConnect, the balances are retranslated into PLN currency.

Consolidation

(a) Subsidiaries

Subsidiaries are all entities (including special purpose entities) over which the group has the power to govern the financial and operating policies generally accompanying a shareholding of more than one half of the voting rights. The financial statements of subsidiaries are included in the consolidated financial statements from the date that control commences until the date that control ceases.

The purchase method of accounting is used to account for the acquisition of subsidiaries by the group. The cost of an acquisition is measured as the fair value of the assets given, equity instruments issued and liabilities incurred or assumed at the date of exchange, plus costs directly attributable to the acquisition.

The excess of the cost of acquisition over the fair value of the group's share of the identifiable net assets acquired is recorded as goodwill. If the cost of acquisition is less than the fair value of the net assets of the subsidiary acquired, the difference is recognised directly in the income statement.

Income and expenses of subsidiaries acquired or disposed of during the year are included in the consolidated statement of comprehensive income from the effective date of acquisition and up to the effective date of disposal, as appropriate.

Inter-company transactions, balances and unrealised gains on transactions between group companies are eliminated. Unrealised losses are also eliminated.

Accounting policies of subsidiaries have been changed where necessary to ensure consistency with the policies adopted by the group.

(b) Associates

Associates are all entities over which the group has significant influence but not control, generally accompanying a shareholding of more than 20% and less than 50% of the voting rights. Investments in associates are accounted for using the equity method of accounting and are initially recognised at cost. The cost of the investment includes transaction costs.

The group's share of its associates' post-acquisition profits or losses is recognised in the income statement, and its share of post-acquisition movements in reserves is recognised in reserves. The cumulative post-acquisition movements are adjusted against the carrying amount of the investment.

When the Group's share of losses exceeds its interest in an equity-accounted investee, the carrying amount of that interest, including any long-term investments, is reduced to zero, and the recognition of further losses is discontinued except to the extent that the Group has an obligation or has made payments on behalf of the investee.

Unrealised gains on transactions between the group and its associates are eliminated to the extent of the group's interest in the associates. Unrealised losses are also eliminated unless the transaction provides evidence of an impairment of the asset transferred.

Accounting policies of associates have been changed where necessary to ensure consistency with the policies adopted by the group.

Segment reporting

An operating segment is a component of the Group that engages in business activities from which it may earn revenues and incur expenses, including revenues and expenses that relate to transactions with any of the Group's other components. All operating segments' operating results are reviewed regularly by the Group's management and directors to make decisions about resources to be allocated to the segment and to assess its performance, and for which discrete financial information is available.

The Company's Management has assessed the Group's business from the segment reporting perspective and decided that they financial results of Photon Energy Group to be reported per segments from the objective perspective from 1 January 2010.

As of 31 December 2013, the Management Board has decided to decrease the number of segments reported.

The Management identified the following segments:

- Energy Solutions (wholesale and import of FVE components, engineering and construction services -turn-key photovoltaic systems' installations for external clients and Photon Energy),
- Production of electricity (includes SPE that finished building of photovoltaic power plants and those are connected to the distribution network and produce the electricity)

- PV Investment This segment represents OCI of the Group flowing from the revaluation of the PV producing the electricity and it is related to project companies that generate the revenues as shown in segment Production of electricity.
- Operations, maintenance and PVPP supervision
- Other, not related to any of the above mentioned segments.

Other operations include the financing and insurance solutions for PV investors, intermediating investments in rooftop photovoltaic projects and other less significant activities. None of these operations meets any of the quantitative thresholds for determining reportable segments in 2017 or 2016.

Segment results that are reported include items directly attributable to a segment as well as those that can be allocated on a reasonable basis

Segment capital expenditure is the total cost incurred during the year to acquire property, plant and equipment, and intangible assets other than goodwill.

Foreign currency translation

(a) Functional and presentation currency

Items included in the consolidated financial information of each of the group's entity are measured using the currency of the primary economic environment in which the entity operates ('the functional currency'). The consolidated financial information is presented in EUR, which is the company's functional and the group's presentation currency.

The consolidated financial information is presented in EUR, however, for presentation purposes; the financial information is translated into PLN as the presentation currencies. Effect from this translation is presented in Equity - in the Fund for currency conversions.

Exchange rates as shown in table below were applied. All exchange rates were provided by the European Central Bank. Statement of financial position applicable exchange rate represents the exchange rate as of the last day of the reporting date as according to IAS 21. Statement of comprehensive income exchange rate represents the average of daily exchange rates effective within the relevant period.

	PLN	СZК		
	2016Q2	2017Q2	2016Q2	2017Q2
EUR exchange rate – low	4.234	4.171	27.020	26.145
EUR exchange rate – high	4.460	4.273	27.150	27.060
EUR exchange rate – average	4.372	4.215	27.039	26.532
EUR exchange rate – end of period	4.437	4.226	27.130	26.195

(b) Transactions and balances

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions or valuation where items are re-measured. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year-end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognised in the income statement.

(c) Group companies

In case of entities, whose functional currency is CZK, CHF or AUD, the financial statements are retranslated at the consolidation into EUR using year-end rate for balance sheet and average rate for profit/loss items.

Property, plant and equipment

Property, plant and equipment are carried at their fair values, with the exemption of fixed assets under construction which are carried at costs.

Inventories

Inventories are measured at the lower of cost and net realisable value. Net realisable value is the estimated selling price in the ordinary course of business, less the estimated costs of completion and selling expenses.

The cost of inventories is based on the weighted average principle, and includes expenditure incurred in acquiring the inventories, production

or conversion costs and other costs incurred in bringing them to their existing location and condition.

Revenue recognition

Revenue comprises the fair value of the consideration received or receivable for the sale of goods and services in the ordinary course of the group's activities. Revenue is shown net of value-added tax, returns, rebates and discounts and after eliminating sales within the group.

The group recognizes revenue when the amount of revenue can be reliably measured, it is probable that future economic benefits will flow to the entity and when specific criteria have been met for each of the group's activities as described below. The amount of revenue is not considered to be reliably measurable until all contingencies relating to the sale have been resolved. The group bases its estimates on historical results, taking into consideration the type of customer, the type of transaction and the specifics of each arrangement: the revenues related to development projects (PV power stations) are measured by the percentage of completion method (refer below to Construction contracts).

Trade receivables

Trade receivables are recognised at nominal value, less provision for impairment.

A provision for impairment of trade receivables is established when there is objective evidence that the group will not be able to collect all amounts due according to the original terms of the receivables. Significant financial difficulties of the debtor, probability that the debtor will enter bankruptcy, and default or delinquency in payments are considered indicators that the trade receivable is impaired. The amount of the provision is the difference between the asset's carrying amount and the present value of estimated future cash flows. When a trade receivable is uncollectible, it is written off.

Cash and cash equivalents

Cash and cash equivalents include cash on hand and current accounts with banks and term bank deposits.

Share capital

Ordinary shares are classified in equity as Issued share capital. Consideration received above the nominal value of the ordinary shares is classified in equity as Share premium.

Trade payables

Trade payables are recognised at nominal value.

Loans and Borrowings

Loan and Borrowings are classified as short-term liabilities (due within 12 months after the reporting date) or long-term liabilities (due more than 12 months after the reporting date).

Financial costs related to construction period of internal non-current assets are capitalised (refer to Property, plant and equipment).

Current and deferred income tax

The tax expense for the period comprises current and deferred tax.

The current income tax charge is calculated on the basis of the tax laws enacted or substantively enacted at the reporting date in the countries where the company's subsidiaries and associates operate and generate taxable income.

Deferred income tax is recognised on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the consolidated financial information. Deferred income tax asset is recognised by the Group in case the Management anticipates the future profits will offset the current income tax asset.

18. Management Board declaration

We hereby confirm that according to our best knowledge the information about Photon Energy N.V. contained in this report is correct as of the publication of this document and that it fairly reflects the Company's financial situation and business activities.
